Cat tree measuring checklist

Measure the cat, the final location, and the delivery route before comparing towers.

Cat: _____ **Room:** _____ **Date:** _____

01 / Your cat

Current weight	Use the current measured weight, not a breed average.	_____
Body length	Nose to base of tail while standing naturally.	_____
Shoulder height	Floor to top of shoulder.	_____
Sleeping width	Comfortable curled-up outside width.	_____

02 / Final location

Usable floor width	After baseboards, vents, doors, and furniture.	_____
Usable floor depth	Mark the true rectangle on the floor with tape.	_____
Vertical clearance	Floor to ceiling, shelf, or other obstruction.	_____
Anchor distance	Distance to a suitable wall/stud position.	_____

03 / Delivery route

Narrowest opening	Door, stair, elevator, vehicle, or hallway.	_____
Tightest turn	Width/depth available through the turn.	_____
Assembled delivery?	Check package size and whether it arrives assembled.	☐ Yes ☐ No

Listing cross-check

- ☐ Base footprint fits inside the marked floor rectangle.
- ☐ Smallest sleeping platform/condo opening fits this cat.
- ☐ Step gaps suit the cat's age and mobility.
- ☐ Current manufacturer weight guidance checked.
- ☐ Anchoring instructions and hardware checked for this model.
- ☐ Replacement surfaces or parts availability checked.

Stability check: weight capacity alone does not prove resistance to tipping. Base width, tower height, hardware, anchoring, floor surface, and a moving cat all matter. Follow the exact model's assembly and anchoring instructions.
